

Searching for a Specific User and Updating the User Information.

Write-up:

1. Created a Spring MVC web application that will retrieve users based on their user ID.
2. The retrieved user data will then can be edited in a form and updated in the database.
3. The entire database processing has been done using Hibernate.
4. Front pages will be made in JSP.
5. The admin can retrieve users based on their user ID and update their information as required.
